

[TASK] .NET Software Engineer

The task is to develop a web application written in C#. The application should provide a possibility for users to CRUD companies and employees.

One company should have a name and creation date. One company may have different offices, the office should have a country, city, street, street_number and if it is the headquarters or not.

An employee should have first_name, last_name, starting_date, salary, vacation_days, and experience_level(junior, mid, senior). Also, employees may work from different offices, if they like to relocate for a summer.

Requirements:

- Frontend: Any modern framework (Angular, React, Vue or other) or MVC
- Backend: C#
- Database: Relational database

Good luck!
